## ABOUT ME

I'm a final-year B.Tech Information Technology student at Vidyalankar Institute of Technology. I'm focused on becoming a full-stack software developer, with hands-on experience building backend systems using Node.js, NestJS, and PostgreSQL, along with AI-integrated features using Gemini and OpenAI APIs.

## EDUCATION

|                                                                         |                          |
|-------------------------------------------------------------------------|--------------------------|
| <b>Vidyalankar Institute of Technology</b>                              | Mumbai, India            |
| <i>Bachelor of Technology in Information Technology (CGPA: 9.14/10)</i> | <i>2023 – Present</i>    |
| <b>St.Xaviers High School &amp; Jr.College</b>                          | Navi-Mumbai, Maharashtra |
| <i>Higher Secondary Certificate (HSC) – 81.33%</i>                      | <i>2021 – 2023</i>       |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Sprite Genix</b>                                                                                                                                                                                                                                                                                                                                                                                                                                            | December 2025 – March 2026 |
| <i>Full Stack Developer (Project-Based)</i>                                                                                                                                                                                                                                                                                                                                                                                                                    | <i>Remote</i>              |
| <ul style="list-style-type: none"><li>Contributed as a full-stack developer on SimpliCV, an AI-powered resume builder built with Next.js, Prisma, and PostgreSQL.</li><li>Integrated <b>20+ resume templates</b> and built a <b>customization panel</b> (layout, font, positioning with live preview), along with an <b>AI-powered auto-fill feature</b> using Google Gemini/OpenAI APIs to extract and populate resume fields from free-text input.</li></ul> |                            |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Floventry – Multi-Warehouse Inventory Management Platform</b>   <i>NestJS, GraphQL, Supabase, Next.js</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <ul style="list-style-type: none"><li>Architected a full-stack inventory management platform with a schema-driven GraphQL spanning 22 backend modules and 20+ entity types, covering procurement, stock tracking, and billing.</li><li>Implemented FEFO-based stock lot tracking and an end-to-end procurement flow (Purchase Orders → GRNs → Sales Orders → Issue Notes), along with role-based multi-tenant access control. (4 roles, per-warehouse scoping)</li><li>Built a real-time notification system using GraphQL Subscriptions over WebSockets, backed by Apollo Client caching, and integrated Razorpay billing with webhook-verified payments and plan-gated feature access.</li></ul> |
| <b>TalendMatch – AI-Powered Talent Matching Platform</b>   <i>Next.js, TypeScript, PostgreSQL, Gemini API</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <ul style="list-style-type: none"><li>Built a weighted scoring algorithm ranking candidates against job requirements across technical skills, soft skills, and experience, with mandatory-skill disqualification logic and a bulk ranking API.</li><li>Implemented hybrid candidate search combining keyword matching with semantic search using Gemini embeddings and cosine similarity, with automatic fallback to keyword mode if the embedding call fails.</li></ul>                                                                                                                                                                                                                           |
| <b>VentureVista – AI-Powered Location Feasibility Analyzer</b>   <i>FastAPI, React, PostgreSQL, Gemini API</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <ul style="list-style-type: none"><li>Built a full-stack feasibility analysis tool using FastAPI and React, implementing a 6-step pipeline (geocoding → Places API → LLM classification → scoring → report generation) to evaluate business viability at a given location.</li><li>Designed a query POI fetching strategy against the Google Places API with Haversine-based deduplication, and a Gemini-to-Ollama fallback system.</li></ul>                                                                                                                                                                                                                                                      |

## TECHNICAL SKILLS

**Core Stack:** TypeScript, JavaScript, Java  
**Frameworks:** Next.js, NestJS, React.js, Node.js  
**API:** REST, GraphQL  
**Database:** PostgreSQL  
**AI/Tools:** Google Gemini API, OpenAI API  
**Tools:** Git & GitHub, Postman
